## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-18, drawn to a thermooptically active composition, classified in class 106, subclass 271.
  - II. Claims 19-28, drawn to a waveguide attenuation device, classified in class 385, subclass 140.
2. The inventions are distinct, each from the other because of the following reasons:
3. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the attenuation device of Group II does not require a thermooptically active composition made of wax and polymer. It simply describes an active medium having a microcrystalline wax phase transition with no mention of polymer. The subcombination has separate utility such as for use in an optical switch.
4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
5. A telephone call was made to Mark Tetreault on 10 November 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Art Unit: 2874

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
